

Here is a list of the popular equipment Richard Hirstwood uses on his courses and hands on training.

The 'ION party starter' is a lighting up Bluetooth speaker. The sound is not incredible but for the size of the unit the light is wonderful.

'Shadow board' is the light storing sheet which is used to make fire exit signs. You can store shadows or write in light with a UV torch.

'UV torches' are available from many suppliers but you need to find reasonable quality products as there are some very cheap offerings.

'Sound to light bars' and other effects are cheap and very effective. Placed in opaque boxes they are a wonderful effect.

'Meteorlight Glow balls' light up and are very tough. They can be bounced around and as a bonus they float in water.

'Survival sheets' have been around for years and are still very effective for reflecting light for visual stimulation.

'Wowee' speakers are great for sound vibration with resonance boards and even ordinary chairs. The 'Wowee' professional is a Bluetooth version, but it can be difficult to get.

'Hotrose Rotating Disco KTV Bar Party Stage light' is the name of this product. Its actually small and mains powered but has a remote control.

'Sunflower LED sound control lights' are sound operated and best used in boxes. They can be used with survival sheets to create a stunning sound to light effect.

These items are novelties and not toys, learners should never be left alone with either battery or mains powered equipment.

These items are all available on Amazon but if you would like to save yourself time finding the individual items and the training movies then look at the sensory kits at Hirstwood.com

You also receive training movies and PDF instructions to ensure safe and effective
